6.2 TECHNICAL ORIENTED COMPANIES	28
6.3 FINANCIAL ORIENTED COMPANIES	48

1 Introduction

An important step towards more transparency and therefore efficiency in many means within the M@NT industry is the documentation of relevant websites. Internet research nowadays is one of the most important knowledge sources. Moreover, the www is most suitable for the cross border exchange of knowledge and opinions.

Regardless of the identified areas which should be centrally collected and structured, a comprehensive thematic and quality-evaluated collection of relevant websites will be helpful for any interested party.

The following list cannot be meant final, since the environment currently changes due to exits, additions and mergers. Anyway, it should be a first step towards a database. But will have to be monitored and adjusted frequently in order to ensure consistence.

2 Objectives and Scope

Generally sites have been looked at following the grid. Financial and technical entities are not yet assessed, but collected. Main objective is to gain a structured database of existing points of interest with the additional information on content and quality in order provide more efficient guidance through the vast variety of sites.

Moreover, as a first project step, this exercise identifies state of the art sites and content in order to gain expertise and partners for the further procedure.

3 Discussion Framework and Definitions

3.1 General Information

Besides name and URL of the sites, information on business activity is contained in the list. This abstract is a summary of the sites self-introduction to the market.

Further on it is tracked, whether the sites are yet or still active.

3.2 Industry focus

The following elements are tracked:

- Micro - Microtechnology
- Nano - Nanotechnology
- Hightech – at least focus on innovative technologies, be it without M@NT focus
- Unspecified – no clear industry focus

The Elements can appear notified in combination, e.g. Nano/Hightech means general focus on high-tech with some specific nanotechnology elements.

3.3 Nation

Information on geographic activity. Elements are:

- National – relevant nation named (e.g. CH, GER, ESP etc.)
- EU – EU supported or initiated initiative
- Other – Regional etc.

These characteristics can be combined as well, e.g. D / Regional (German, regional focused entity).

3.4 Graphic / Layout

Documentation of quality in stages 1 till 5. Rated are technical performance, structure and navigation. 1 means “nothing to learn from that”, 5 means “Reference example”. It is suggested, to concentrate on the “5” rated ones in order to gather quick orientation. Everything below “3” is relatively irrelevant.

3.5 Content

Same weighting as in “Graphic Layout”. The quotation takes in consideration the fact, that a site may be very focused, but within this restricted scope of prime content, which can result to “5” ratings for relatively small sites.

3.6 Areas

This point orders the sites to certain industry activity fields. Documented characteristics are:

- Governmental – State initiatives
- Financial – financial focused sites, be it actual funding or investor contacts
- Academic – University / scientific content
- Commercial – Site providing commercial services and products to its visitors
- Industrial – Industrial initiatives
- Network – focus on exchange
- Support – focus on supportive services to visitors

These characteristics may be combined in order to show up the nuances in activity. E.g. “Financial / Network” will contain information on the financial community and related material (e.g. www.evca.com). Or “Support / Commercial” will be a service provider of Consulting, staffing or other billable products.

3.7 Importance for EMINET

Final suggestion. “1” will be neglected, “5” are the sites to be looked at in advance to the set up of activities in order to avoid redundancies and enhance efficiency.

4 Conclusion

EMINENT should set up responsibility for the current maintenance of the list.

5 Recommendation and next steps

- Discussion of suitability of the grid
- Dissemination of database and request for additions from addressees
- Continuous development and expansion

6 Attachment: Website Lists

6.1 Organisations

URL	Active	Abstract	Industry	Nation	Graphic	Content	Areas	Importance
